

EU Code Week School Label

To the attention of the *I.C.N. ZINGARELLI*,

We are glad to confirm that your school has been awarded the "EU Code Week School Label" for the period 2022-2024!

Congratulations for your success!

With this Label we acknowledge all the hard work you put into bringing EU Code Week to your school and motivate students to discover the power and beauty of programming and coding.

The Label will remain active for two (2) academic years, 2022/2023 and 2023/2024 and your school will be expected to implement coding and computational thinking across the curricula in these two years.

A few words about the Code Week School Label across European Schools.

EU Code Week aims to raise awareness of the significance of coding and digital literacy among students in pre-primary, primary and secondary education. Activities encompassing computational thinking and coding support the development of digital skills and transversal competences and let students explore how technology can help solve problems and innovate.

The EU Code Week School Label has been established to recognise school-level involvement in Code Week. The Code Week School Label serves both to **award those schools** which have had an enduring commitment to Code Week, and which are ready to **support the local development** of the movement.

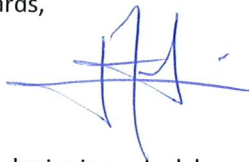

Every Code Week School not only has contributed to Code Week in the previous years through the organisation of Code Week activities but has also a plan to integrate coding and computational thinking into the school curriculum, through the organisation of Code Week activities, the training of teachers, and by raising awareness for the importance of teaching coding and computational thinking.

EU Code Week supports the provision of high-quality, inclusive, and accessible digital education and skills for teachers and students. Local implementation of the initiative is challenging yet essential as bringing unique opportunities for students promoting among others gender equity in coding.

Congratulations for taking part in this Pan-European vision spreading Code Week's values in your local area and helping students delve into the new era of coding in education!

As a Code Week School, we are calling you to continue your ongoing efforts supporting teachers and students' digital skills development.

Kind regards,

Rehana Schwinninger-Ladak
European Commission, DG Connect, Head of Unit Interactive Technologies, Digital for Culture and Education (CNECT.G.2)
